UXP Academy

UI/UX Design Program Class of 2026

4-Month Offline Intensive | Learn by Unlearning

Program Overview

UXP Academy is a 4-month offline design program built on a single philosophy:
great designers are made by unlearning rigid perceptions and mastering fundamentals. With immersive hands-on learning, real case studies, and a live internship, students graduate industry-ready.

Month 1	Month 2 & 3	Month 4
Design Foundations	UX/UI & Case Studies	Internship

Teaching Philosophy

Every class at UXP Academy is offline, interactive, and feedback-driven. We believe in learning by doing no long pre-recorded lectures, no passive watching. Instead, students apply concepts immediately, ask questions in real time, and build a genuine community with peers.

AI is embedded throughout the curriculum not taught as a separate add-on. Students use AI to think better during research, design faster during execution, and communicate clearly when presenting work and writing case studies.

Who Should Join

UXP Academy welcomes anyone with curiosity and a drive to keep learning. No prior design experience is required that include:

- Graphic Designers
- Software Engineers
- IT Professionals
- UI Developers
- Architects
- Interior Designers
- Students & Freshers
- Project Managers

Mentors Behind Your Journey

Aradhya Satghare

Lead UI/UX Designer

Aradhya is a UX designer who focuses on clarity, usability, and real impact. She designs purpose-driven interfaces by simplifying complex systems and applying systems thinking ensuring every element works seamlessly together. Her decisions are aligned with user needs and business goals, because for her, design isn't just visual it's about how things work and convert.

Zula Prajapati

Senior UI/UX Designer

Zula Prajapati is a UI/UX designer known for creating clean, user-friendly digital experiences. She combines visual creativity with structured thinking, focusing on usability, clarity, and impactful design solutions. Her work reflects a strong interest in problem-solving often leveraging modern tools and AI to enhance workflow and improve user experience.

Month 1: Design Foundations

The first month is about unlearning habits that block creative thinking and building a rock-solid foundation. Students develop visual literacy, critical reasoning, and an intuitive sense of aesthetics before touching any design tool.

Weeks 1–4 | Unlearn & Re-learn		
Week	**Topic**	**What You Will Learn**
Week 1	Critical Thinking	Develop a systematic approach to uncovering patterns and insights. Learn to evaluate information objectively, question assumptions, identify biases, and recognise connections between ideas.
Week 2	Visual Literacy	Interpret and appreciate visual design and its underlying messages. Explore color theory, composition, balance, proportion, harmony, and the historical and cultural forces that shape aesthetic trends.
Week 3	Cognitive Empathy	Understand user needs, desires, and experiences at a deep level. Learn to see the world from varying perspectives and integrate empathy into product thinking to create positive emotional connections.
Week 4	Basics of Visual Design	Master the art and practice of arranging visual elements to create appealing, effective compositions. Explore layout, grids, color, and the balance between form and function.

Month 2: UX Research & Interface Design

Month 2 shifts focus to how design works in real products. Students learn UX research methods, the anatomy of great interfaces, and how to use industry-standard tools like Figma. The month closes with wireframing and UI guidelines, ready for case study work.

Weeks 5–8 | UX Fundamentals		
Week	**Topic**	**What You Will Learn**
Week 5	Benchmarking & UX Audit	Compare products against industry standards and competitors. Understand heuristic evaluation, usability best practices, and how to audit an existing product for opportunities.
Week 6	Visual Hierarchy	Learn to structure content and interfaces so information flows clearly. Study layout, whitespace, typography, alignment, visual cues, depth, and layering principles.
Week 7	UX Research	Introduction to design methodologies. Learn to draw insights from qualitative and quantitative data, conduct user interviews, and gather business requirements.
Week 8	Design Systems & Figma Basics	Introduction to Figma the industry-standard design tool. Explore UI element types, design system thinking, mood boards, component libraries, and how to maintain visual consistency.

Weeks 9–12 | Interaction & Interface		
Week	**Topic**	**What You Will Learn**
Week 9	Behavior Design	Understand user motivations, triggers, habits, and decision-making. Map user personas and journeys. Get introduced to persuasive design principles and ethical influence.
Week 10	Figma Deep Dive	Master Figma's advanced features: auto layout, components, variants, constraints, and responsive design. Apply design thinking through hands-on exercises across mobile and web frames.
Week 11	Wireframing	Build information architecture and define user flows. Create low-to-high fidelity wireframes, iterate based on feedback, and practice annotation and documentation skills.
Week 12	UI Guidelines	Learn best practices that ensure visual consistency across products. Covers design tokens, interaction patterns, accessibility considerations, and handoff communication with developers.

Month 3: Case Studies & Advanced Skills

Month 3 is where students bring everything together. They work on real-world case studies from brief to final presentation, applying UX writing, motion design, and storytelling to create portfolio-worthy projects.

Weeks 13–16 | Applied Design & Case Studies		
Week	**Topic**	**What You Will Learn**
Week 13	UX Writing	Understand tone of voice, brand voice, localization, and internationalization. Practice writing clear microcopy for forms, dropdowns, CTAs, tooltips, nudges, and onboarding flows.
Week 14	Motion & Micro-interactions	Explore animation history and principles of motion design. Create micro-interactions in Figma and get introduced to Lottie and JSON-based animation exports.
Week 15	Case Study- Project A	Apply the end-to-end design process to a real brief: research, define, wireframe, UI design, and prototype. Work is critiqued by mentors with structured feedback.
Week 16	Case Study- Project B & Presentation	Take a second, more complex brief from problem statement to polished prototype. Learn storytelling principles, structure compelling case study narratives, and present to a live panel.

Month 4: Internship

The final month gives students hands-on experience on a live project under the guidance of experienced designers. This is where classroom learning meets industry reality.

Weeks 17–20 | Live Project Internship		
Week	**Topic**	**What You Will Learn**
Week 17–18	Onboarding & Discovery	Join a real project team, get briefed on the product and business context, conduct stakeholder interviews, and contribute to the research and discovery phase.
Week 19–20	Design & Delivery	Own one or more design features from wireframe to high-fidelity. Receive daily mentor feedback, iterate quickly, and prepare a final handoff-ready design along with a portfolio case study.

Program Details

Duration	4 Months (3 months learning + 1 month internship)
Format	Offline classroom | No pre-recorded content | Real-time mentorship
Tools Covered	Figma (primary), Lottie, AI-assisted design tools, Figjam
What You Build	2 case study projects + 1 live internship project = portfolio-ready on day one

Where & When

Ahmedabad

Cohort starts in May

UX Pacific Academy
512, Majestic Plaza, Near Law Garden BRTS Stand,
Ahmedabad, Gujarat 380006
